Q.4
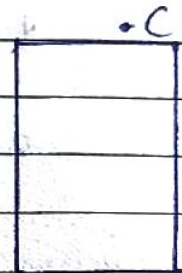

### Steps of develop software using the C language

Step-1 →
First Creat a Source file in c language

Step 2 → Translate the Source file in Share Software

for translate we need translator source file
Software like Build
Preprocess ; Compiler , Linker

and the translation called Build

Build

```
.c  →  ( Preprocessor
          Compiler      )  →   .exe
          Linker                011011 1
                                101100 1
                                100011 1
                                110110 1

Source                                Software
file
```

Q.5

a) The current letest version of C language is C++,

b) Dennis Ritchie Developer of C language in 1972

c) System Softwares is generally using for System

Application Software is using by user

D)
